Brackets:

The distributive property states that $a(b+c) = ab + ac$, for all $a, b, c \in \mathbb{R}$.

The equivalence class of a is $[a]$.

The set A is defined to be $\{1, 2, 3\}$.

The movie tickets cost \$11.50.

$$\left(\frac{1}{1+\left(\frac{1}{1+x}\right)}\right)$$

Tables:

x	1	2	3	4	5
$f(x)$	10	11	12	13	14

x	1	2	3	4	5
$f(x)$	$\frac{1}{2}$	11	12	13	14

Table 1: These values represent the function $f(x)$.

$f(x)$	$f'(x)$
$x > 0$	The function $f(x)$ is increasing. The function will always be greater than zero. The function will also always be increasing.

Table 2: The relationship between f and f'.
